1. *Staphylococcus aureus* (10<sup>6</sup> CFU/g) and *Escherichia coli* (10<sup>6</sup> CFU/g) were used as the test strains. The strains were cultured in Tryptic Soy Broth (TSB) (Difco, Franklin Lakes, NJ, USA) at 37 °C for 24 h. The bacterial suspensions were adjusted to a concentration of 10<sup>8</sup> CFU/mL in sterile distilled water.

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in YEA medium for 24 h at 28°C. The cell concentration was adjusted to 10<sup>8</sup> cells/ml. The cells were then mixed with the plant tissue and incubated for 24 h at 28°C. The plant tissue was then cultured on the selective medium. The transformation efficiency was determined as the number of transformants per 100 µg of plant tissue. The data are the mean ± SD of three independent experiments.

One day, from the Dnieper, the "Eurasia" (mailboat) came in, with a mail, announcing the spot of a new discovery of gold.

Die Kugelradien  $r_1$  und  $r_2$  sind gegeben durch

The Martins Museum is a small  
place, but it is a very interesting place.
